

Priority Health Collaborates With GRAIL as the First Michigan Health Plan to Offer the Galleri® Multi-Cancer Early Detection Blood Test to Employer Plans

July 16, 2026

MENLO PARK, Calif., July 16, 2026 /PRNewswire/ -- GRAIL, Inc. (Nasdaq: GRAL), a healthcare company whose mission is to detect cancer early when it can be cured, today announced a collaboration with Priority Health, a nationally recognized nonprofit health plan and the third largest provider-sponsored health plan in the nation, to make GRAIL's Galleri® multi-cancer early detection (MCED) test available to Priority Health's self-insured employer groups. Priority Health launched coverage for Galleri in its Thrive and Thrive Plus Medicare Advantage plans in 2025 and is expanding on its partnership with GRAIL to become the first Michigan health plan to enable its employer groups to easily add the Galleri test to their existing cancer screening coverage.

Priority Health is a nationally recognized nonprofit health plan serving more than 1.4 million members across Michigan and beyond. As a comprehensive health plan offering fully funded, self-funded, level-funded and third-party administrator (TPA) models, Priority Health provides employers with the flexibility to design customized benefit programs that integrate its extensive provider network, care management services, pharmacy benefits and stop-loss coverage options.

"Early cancer detection can lower health care costs by enabling less intensive, more effective treatments. By adding Galleri to recommended single-cancer screenings, GRAIL has the unique opportunity to help define a new standard of care and help prevent costly late-stage care and potentially improve patient outcomes through earlier, asymptomatic cancer detection," said Megan Hall, PhD, vice president of Medical Affairs at GRAIL. "Priority Health is leading the way in innovative employee benefit offerings, and we are excited to collaborate to bring Galleri to their customers while expanding broader market access."

Single-cancer screenings are an important tool for detection and diagnosis of five cancers in the U.S, but 70% of cancer deaths are caused by cancers without recommended screening tests. With a simple blood draw, Galleri screens for many of the deadliest cancers before symptoms appear — when they can be treated more easily and are potentially curable. When a cancer signal is found, Galleri provides a cancer signal of origin with high accuracy to help guide an efficient diagnostic work-up. Galleri is supported by rigorous studies in intended use populations and is the only available MCED test with demonstrated performance in patients being screened for cancer.

"At Priority Health, we care about helping employers create benefits that truly work for their teams," said Chase Osbourne, senior vice president of employer solutions & innovation at Priority Health. "By partnering with GRAIL, we're making it easier for employers to support early cancer detection and proactive health. We're excited to offer choices and new options to our employer groups and members, so they can get the care they need, when they need it."

About Priority Health

Our members are at the heart of everything we do. With more than 30 years in business, [Priority Health](#) is the second-largest health plan in Michigan and the third-largest provider-sponsored health plan in the nation, offering an extensive portfolio of health benefits options for [employer groups](#) and [individuals](#), including [Medicare](#) and [Medicaid](#) plans. Serving more than 1.4 million members each year in Michigan, Indiana and Ohio, Priority Health offers a broad network of primary care physicians. Priority Health continues to be recognized as a leader for quality, customer service, transparency and product innovation.

About GRAIL

GRAIL is a healthcare company whose mission is to detect cancer early, when it can be cured. GRAIL is focused on alleviating the global burden of cancer by using the power of next-generation sequencing, population-scale clinical studies, and state-of-the-art machine learning, software, and automation to detect and identify multiple deadly cancer types in earlier stages. GRAIL's targeted methylation-based platform can support the continuum of care for screening and precision oncology, including multi-cancer early detection in symptomatic patients, risk stratification, minimal residual disease detection, biomarker subtyping, treatment and recurrence monitoring. GRAIL is headquartered in Menlo Park, Calif. with locations in Washington, D.C., North Carolina, and the United Kingdom.

About Galleri®

The Galleri® multi-cancer early detection (MCED) test screens for more than 50 cancer types, including many deadly cancers that currently lack screening options, such as pancreatic, ovarian and liver/bile duct cancers¹. The Galleri test is the only MCED test clinically proven through a randomized controlled trial to increase earlier cancer detection (Stage I-III) and reduce Stage IV diagnoses - enabling more patients to have access to potentially curative treatment options². When added to standard-of-care screening, the Galleri test reduced Stage IV diagnosis by more than 20% after the first year of screening across all stageable cancers^{2,*}. The Galleri test increased cancer detection by screening four times versus standard of care screening alone². The Galleri test has the lowest false positive rate among MCED tests** and the ability to predict the Cancer Signal of Origin with greater than 90% accuracy, helping guide efficient diagnostic evaluation¹⁻³. The Galleri test is backed by a robust clinical evidence program, with more than 380,000 participants across multiple studies, including the NHS-Galleri trial, the first and only randomized controlled trial for an MCED test. The

Galleri test has delivered consistent performance across these studies. The Galleri test requires a prescription from a licensed healthcare provider and should be used in addition to recommended cancer screenings such as mammography, colonoscopy, prostate-specific antigen (PSA) test, cervical or lung cancer screening. The Galleri test is recommended for adults with an elevated risk for cancer, such as those aged 50 or older.

For more information, visit galleri.com.

*A statistically significant reduction was not observed in combined stage III–IV diagnoses across three screening rounds for 12 cancer types responsible for around two-thirds of cancer mortality in the US and UK.

**Test performance metrics do not represent results of a head-to-head comparative study. Separate studies have different designs, objectives, and participant populations, which limits the ability to draw conclusions about comparative performance.

Important Galleri Safety Information

The Galleri test is recommended for use in adults with an elevated risk for cancer, such as those age 50 or older. The test does not detect all cancers and should be used in addition to routine cancer screening tests recommended by a healthcare provider. The Galleri test is intended to detect cancer signals and predict where in the body the cancer signal is located. Use of the test is not recommended in individuals who are pregnant, 21 years old or younger, or undergoing active cancer treatment. Results should be interpreted by a healthcare provider in the context of medical history, clinical signs, and symptoms. A test result of No Cancer Signal Detected does not rule out cancer. A test result of Cancer Signal Detected requires confirmatory diagnostic evaluation by medically established procedures (e.g., imaging) to confirm cancer. If cancer is not confirmed with further testing, it could mean that cancer is not present or testing was insufficient to detect cancer, including due to the cancer being located in a different part of the body. False positive (a cancer signal detected when cancer is not present) and false negative (a cancer signal not detected when cancer is present) test results do occur. **Rx only.**

Laboratory/Test Information

The GRAIL clinical laboratory is certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA) and accredited by the College of American Pathologists. The Galleri test was developed — and its performance characteristics were determined — by GRAIL. The Galleri test has not been cleared or approved by the Food and Drug Administration. The GRAIL clinical laboratory is regulated under CLIA to perform high-complexity testing. The Galleri test is intended for clinical purposes.

GRAIL Forward Looking Statements

This press release contains forward-looking statements. In some cases, you can identify these statements by forward-looking words such as "aim," "anticipate," "believe," "continue," "could," "estimate," "expect," "intend," "may," "might," "plan," "potential," "predict," "should," "would," or "will," the negative of these terms, and other comparable terminology. These forward-looking statements, which are subject to risks, uncertainties, and assumptions about us, may include statements related to the potential benefits, uses and impacts of the Galleri test, comparability of clinical study results to a real world setting, benefits of population screening with existing or future versions of Galleri, and commercial and expansion plans, among others.

These statements are only predictions based on our current expectations and projections about future events and trends. There are important factors that could cause our actual results, level of activity, performance, or achievements to differ materially and adversely from those expressed or implied by the forward-looking statements, including those factors and numerous associated risks discussed under the sections entitled "Risk Factors" in our Annual Report on Form 10-K for the period ended December 31, 2025 and our Quarterly Report on Form 10-Q for the period ended March 31, 2026. Moreover, we operate in a dynamic and rapidly changing environment. New risks emerge from time to time. It is not possible for our management to predict all risks, nor can we assess the impact of all factors on our business or the extent to which any factor, or combination of factors, may cause actual results, level of activity, performance, or achievements to differ materially and adversely from those contained in any forward-looking statements we may make.

Forward-looking statements relate to the future and, accordingly, are subject to inherent uncertainties, risks, and changes in circumstances that are difficult to predict and many of which are outside of our control. Although we believe the expectations and projections expressed or implied by the forward-looking statements are reasonable, we cannot guarantee future results, level of activity, performance, or achievements. Our actual results, financial condition and success in our business strategies and operations may differ materially from those indicated in the forward-looking statements. Except to the extent required by law, we undertake no obligation to update any of these forward-looking statements after the date of this press release to conform our prior statements to actual results or revised expectations or to reflect new information or the occurrence of unanticipated events.
